The laser cutting and laminating machine is a machine that integrates laser cutting and laminating functions. It uses laser technology to cut materials and implement lamination functions during the cutting process. Laser cutting and stacking all-in-one machines usually consist of a laser cutting system, a laminating system and a control system. The laser cutting and stacking all-in-one machine uses laser beam to cut materials with high precision, and can cut various materials, such as metal, plastic, cardboard, etc. At the same time, it also has a lamination function, which can automatically stack cut materials together to form complex structures or products. The laser cutting and stacking machine is efficient, precise and automated, and can improve production efficiency and product quality. Laser cutting and stacking machines are widely used in various fields of manufacturing, such as automobile manufacturing, electronic equipment manufacturing, textile processing, etc. It can achieve rapid cutting and lamination of materials, improve production efficiency, reduce manual operations, and reduce production costs.
