Abstracts

A laser dendrometer is an instrument used to measure changes in tree stem diameter. It uses laser technology to monitor the position of the tree stem surface in real time through the emission and reception of laser beams, thereby measuring changes in tree diameter. This instrument usually includes a laser transmitter, receiver, computing unit and data recording equipment.

According to our (Global Info Research) latest study, the global Laser Dendrometer market size was valued at US\$ 130 million in 2023 and is forecast to a readjusted size of USD 220 million by 2030 with a CAGR of 7.8% during review period.

Laser dendrometers are widely used in forestry, agriculture, horticulture and other fields. As the demand for plant growth monitoring increases, especially in agricultural production and forestry management, real-time monitoring and recording of plant growth parameters has become increasingly important. In addition, as laser technology continues to advance and costs decrease, the performance and accuracy of laser stem diameter gauges continue to improve. The introduction of new laser measurement technologies and algorithms makes measurements more accurate and reliable. Therefore, the laser stem diameter meter market has broad development prospects and potential.
