Abstracts

The global Laser Derusting Machine market size is expected to reach \$ 327 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

Laser rust removal machine is a surface treatment equipment based on laser cleaning technology. It uses pulsed or continuous laser beams to irradiate the metal surface, causing the rust layer, oxide or pollutant to absorb energy and undergo instantaneous gasification, peeling or thermal expansion, thereby achieving non-contact removal without damaging the substrate. The core principle is 'selective absorption', which means that the rust layer absorbs laser energy more strongly and is removed after reaching the ablation threshold, while the metal substrate remains intact. This equipment usually consists of fiber lasers, scanning systems, and control systems, and has the characteristics of high precision, no consumables, and environmental protection. It is an important technological path to replace traditional processes such as sandblasting and chemical cleaning. In 2025, global Laser Derusting Machine production reached approximately 3,697 Units, with an average global market price of around K US\$ 58.96 per unit.

The laser rust removal machine market is currently in a rapid growth stage, mainly driven by the upgrading of the manufacturing industry and the tightening of environmental policies. The demand for high-precision and non-destructive cleaning in the high-end manufacturing field is increasing. At the same time, traditional sandblasting and chemical cleaning are gradually being replaced due to pollution and consumables issues, promoting the continuous increase in the penetration rate of laser technology; The industry is showing a trend towards high power, automation, and intelligence, with applications expanding from precision manufacturing to heavy industries such as ships and steel structures. The competitive landscape has formed a structure where

international manufacturers occupy the high-end and Chinese manufacturers are rapidly rising. Although currently limited by high equipment costs and technological barriers, with the decrease in laser costs and the promotion of large-scale applications, the market still has the potential for sustained growth in the future.

Laser rust removal machines have applications in many fields, and the following are some common application scenarios and cases:

Construction industry: In the construction industry, rust removal machines are mainly used for rust removal of materials such as steel structures, steel bars, and steel pipes. For example, in building structures such as bridges, elevated structures, large steel plates, steel components, and steel pipes, rust removal machines can quickly and effectively remove surface rust and oxide scales, improving material durability and aesthetics.

Shipbuilding industry: The shipbuilding industry is one of the important fields for the application of rust removal machines. Due to the long-term exposure of ships to seawater, their surfaces are susceptible to corrosion and rusting, thus requiring regular rust removal treatment. Rust remover can quickly and efficiently remove rust and oxide scale on the surface of ships, extending their service life.

Automotive industry: In the automotive industry, rust removal machines are mainly used for rust removal of automotive components. For example, components such as car engines, chassis, and frames are prone to rust and oxide scales during long-term use. Rust removal machines can remove these rust and oxide scales, improving the surface quality and durability of the components.

Power industry: In the power industry, rust removal machines are mainly used for rust removal of transmission lines and substation equipment. Transmission lines and substation equipment are exposed to natural environments for a long time, and their surfaces are prone to corrosion and rust. Rust removal machines can quickly and effectively remove surface rust and oxide scales, improving the operational efficiency and safety of equipment.

Chemical industry: In the chemical industry, rust removal machines are mainly used for rust removal of various pipelines, storage tanks, reaction vessels and other equipment. These devices are exposed to various chemicals for a long time, and their surfaces are prone to corrosion and rust. Rust removal machines can remove these rust and oxide scales, improving the operational efficiency and safety of the equipment.
