Abstracts

The global Laser Direct Imaging System for PCB market size is expected to reach \$ 1060.1 million by 2029, rising at a market growth of 3.4% CAGR during the forecast period (2023-2029).

The top 5 players occupy about 70% shares of the global market.

The Laser Direct Imaging (LDI) system offers auto focus capabilities so that the system can handle different thicknesses of material and rapid job change-overs without expensive tooling. Using LDI to create the circuit traces gives the PCB manufacturers a lot of advantages, most of them pertaining to weaknesses of using a Photo-tool. Eliminating the need of a Photo-tool removes alignment issues, light refraction issues, and those imperfections related to environmental variations
