The global Laser Distance Measurement Module market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Laser Distance Measurement Module is an electronic device that uses laser technology to measure the distance between two objects. It is also known as a laser rangefinder or laser distance meter. The device emits a laser beam towards the target object, which is reflected back to the module and measured. The distance is then calculated based on the time taken for the laser beam to travel to and from the object.
