Abstracts

According to our (Global Info Research) latest study, the global Laser Doping Machine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Laser Doping Machine is a technology that greatly reduces the cost of the process and increases the energy conversion efficiency. Heavy doping is carried out on the contact part of the metal grid line (electrode) and the silicon wafer, while light doping (low concentration doping) is kept outside the electrode. This structure reduces the recombination of minority carriers on the surface of the emitter, while the metal electrode and the emitter Good ohmic contact can be formed between them, so as to obtain higher short-circuit current, open-circuit voltage and fill factor, and improve the conversion efficiency of solar cells.
