Abstracts

The global Laser Doppler Vibrometer market size is expected to reach \$ 31 million by 2032, rising at a market growth of 3.2% CAGR during the forecast period (2026-2032).

A laser Doppler vibrometer (LDV) is a scientific instrument that is used to make non-contact vibration measurements of a surface. The laser beam from the LDV is directed at the surface of interest, and the vibration amplitude and frequency are extracted from the Doppler shift of the reflected laser beam frequency due to the motion of the surface. The output of an LDV is generally a continuous analog voltage that is directly proportional to the target velocity component along the direction of the laser beam.

Europe is the largest producer of Laser Doppler Vibrometer, with a market share about 45%, followed by North America and China, etc. OMS Corporation, ONO SOKKI, Polytec, OptoMet GmbH and Sunny Optical Technology are the top 5 manufacturers of industry, and they had about 70% combined market share.
