According to our (Global Info Research) latest study, the global Laser Etching Service market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Laser etching service refers to the process of using laser technology to create permanent markings or patterns on a material's surface. This service involves the application of a high-powered laser beam to the surface of the material, which then interacts with the material's surface layer to create the desired etch. Laser etching is a precision process that can achieve extremely fine details and high-resolution images. It is commonly used for marking, branding, or decorating various materials, including metals, plastics, glass, and wood. The laser beam can be controlled with great accuracy, allowing for intricate patterns, logos, text, or barcodes to be etched onto the surface.

Laser Marking is the most versatile of all marking methods. Laser Marking is a Non-Contact form of marking in which a CNC machine directs a laser beam as small as 0.002? in diameter to cut through a work piece to a desired depth. Laser Markings with depths greater than 0.002? are considered to be Laser Engraved, while Laser Markings with depths 0.002? or shallower are considered to be Laser Etched.
