## Abstracts

According to our (Global Info Research) latest study, the global Laser Galvanometer Scanners for 3D Printing market size was valued at US\$ 52.5 million in 2024 and is forecast to a readjusted size of USD 123 million by 2031 with a CAGR of 12.5% during review period.

The laser scanning galvanometer is a key optical device in 3D printing, mainly composed of three core components: X-Y optical scanning head, electronic drive amplifier and optical reflective lens. Among them, the X-Y optical scanning head is responsible for accurately controlling the deflection of the laser beam in the two-dimensional plane to ensure that the laser beam can scan along the predetermined path. The electronic drive amplifier plays the role of signal amplification, amplifying the weak signal provided by the controller to a level sufficient to drive the optical scanning head. The optical reflective lens is responsible for reflecting the laser beam, ensuring that the laser beam can be accurately and efficiently projected onto the 3D printing material, achieving high-precision scanning and curing.
