According to our (Global Info Research) latest study, the global Laser Gas Telemeter market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The laser gas telemeter is a device that uses laser technology for gas concentration measurement and monitoring. It emits laser pulses into the atmosphere and measures the absorption characteristics of specific gases along the path of the pulses, thereby realizing remote sensing of gas concentrations.

The laser gas telemeter uses the principle of the interaction between a laser beam and a specific gas molecule in the atmosphere. Usually, a continuous wave or modulated wave laser is used as the laser source, and different detection techniques are used to measure the intensity change of the laser pulse.
