Abstracts

The global Laser Grooving Machine market size is expected to reach \$ 68026 million by 2032, rising at a market growth of 7.6% CAGR during the forecast period (2026-2032).

In 2025, the global production of Laser Grooving Machine reached 168,000 units, with a global average price of US\$253,000 per unit. The gross profit margin of major companies in the industry was approximately 35%-45%. Laser Grooving Machine is a type of precision laser processing equipment used in the manufacturing of solar cells. It primarily uses a high-energy-density laser beam to locally remove passivation films, dielectric films, or functional films on the surface of solar cells, forming openings, grooves, or contact windows of specific shapes and sizes. This achieves effective contact between the electrodes and the silicon wafer, improving cell conversion efficiency. Its upstream mainly includes lasers, optical lenses, motion control systems, machine tool structural components, and automated loading and unloading components; the midstream includes equipment design, integrated manufacturing, process debugging, and after-sales service; and the downstream is mainly used in the production of PERC, TOPCon, BC/xBC, and other photovoltaic cells, as well as the patterning of perovskite and thin-film solar cells.

This report studies the global Laser Grooving Machine production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Laser Grooving Machine and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
