Abstracts

Laser heat treatment system is a device that uses laser as a heat source for material surface treatment. By controlling the energy density and irradiation time of the laser, the system can heat, melt, solidify and rapidly cool the surface of metal and other materials, thereby improving the hardness, wear resistance and corrosion resistance of the material. Laser heat treatment systems are widely used in the manufacturing industry, especially in the automotive, aerospace, mold manufacturing and other fields, to improve the surface quality and extend the service life of parts.
