Abstracts

The global Laser Line Longpass Filters market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The Laser Line Longpass Filters (measured from an optical density of 6.0 to a transmission of 50%) make it possible to measure even the smallest Raman shifts, making these filters ideal for Stokes Raman scattering measurements. A great alternative to expensive holographic notch filters in the market. Compared to notch filters, these edge filters offer better transmission, higher laser line rejection and steeper edges, allowing measurement of Raman signals very close to the laser line. Large bandwidth and excellent transmission allow these filters to be used in even the most demanding imaging applications.

This report studies the global Laser Line Longpass Filters production, demand, key manufacturers, and key regions.
