Laser magnetic field therapy instrument is a medical device that uses low-level laser therapy and magnetic field therapy to treat various health conditions. Its design objective is to apply lasers and magnetic fields to specific parts of the body to promote healing and alleviate pain. Laser magnetic field therapy equipment typically consists of a handheld device that emits low-level laser and magnetic fields. Laser is usually red or near-infrared, used to stimulate cells and tissues in the body. Magnetic fields are used to generate a pulsating electromagnetic field that can penetrate deep into human tissues. Laser magnetic field therapy devices are believed to work by increasing blood flow, reducing inflammation, and stimulating the body's natural healing process. It is usually used to treat diseases such as pain, inflammation, arthritis, and sports injuries.
