Abstracts

laser metal corrosion cleaning machine is a new type of non-grinding, non-contact and environmentally friendly cleaning method. At the same time, it can solve problems that cannot be solved by traditional cleaning methods. It is mainly used for high value-added products in high-precision industries. Using high-frequency high-energy laser pulses to irradiate the surface of the workpiece, the coating layer can instantly absorb the focused laser energy, so that the oil stains, rust spots or coatings on the surface can be evaporated or peeled off instantly, and the surface attachments or surface coatings can be removed at high speed and effectively, and the laser pulse with very short action time will not damage the metal substrate and will not cause secondary pollution under appropriate parameters. Laser metal corrosion cleaning machine can complete the cleanliness that is difficult to achieve by conventional cleaning, which is safe and efficient and has low long-term costs.

According to our (Global Info Research) latest study, the global Laser Metal Corrosion Cleaning Machine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
