Abstracts

The global Laser Methane Telemetry Module market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The laser methane telemetry module uses laser beams to conduct non-contact detection of target areas, which can achieve high-precision measurement, real-time monitoring and continuous measurement of methane gas, and help study climate change, methane emissions and other related issues.

The laser methane telemetry module uses the tunable diode laser absorption spectroscopy(TDLAS) technology to accurately measure target gases. It contains a laser and driving unit, a laser transmitting and receiving unit, a modulation and demodulation unit, a photoelectric conversion and acquisition unit, and a data processing and communication unit. It has the advantages of small size, fast response speed and high detection sensitivity.
