Abstracts

The global Laser Micro Welding market size is expected to reach \$ 1210 million by 2032, rising at a market growth of 7.4% CAGR during the forecast period (2026-2032).

Laser micro welding is a precision welding technology that uses high energy density laser beam as heat source to locally connect micro size, thin wall, precision or heat sensitive parts. It is characterized by small spot, narrow heat affected zone, small deformation, high positioning accuracy, suitable for welding thin wires, miniature terminals, sensors, medical equipment, electronic components and dissimilar metal small pieces. Compared with traditional resistance welding and TIG welding, laser micro-welding is more suitable for scenes with higher requirements on weld size, consistency and appearance. It can not only realize spot welding and seam welding, but also be used for high-precision automatic batch production.

The gross margin of laser microwelding is about 30%.

This report studies the global Laser Micro Welding demand, key companies, and key regions.
