## Abstracts

According to our (Global Info Research) latest study, the global Laser Microjet Machine Tool market size was valued at US\$ 105 million in 2025 and is forecast to a readjusted size of US\$ 179 million by 2032 with a CAGR of 6.6% during review period.

A Laser Microjet Machine Tool is a precision machining system that combines a laser beam with a very thin water jet to form a water-jet-guided laser process. In this system, the laser beam is coupled into a hair-thin water jet and guided by total internal reflection, while the laser provides the cutting or ablation energy and the water jet guides the beam, cools the processing zone, and removes debris. Compared with conventional dry laser machining, a Laser MicroJet System can reduce thermal damage, contamination, taper, and micro-cracking, making it suitable for high-precision cutting, drilling, grooving, and micromachining of hard, brittle, or high-value materials such as semiconductors, diamond, ceramics, hard metals, aerospace materials, and precision components. In 2025, global sales of Laser Microjet Machine Tool reached approximately 97 units, with an average market price of about USD 1.05 million per unit.

From an industry-chain perspective, the upstream side mainly includes pulsed green solid-state laser sources, optical lenses and windows, nozzles and coupling chambers, high-purity water and filtration units, high-pressure micro-waterjet components, motion-control systems, CNC platforms, vision/alignment modules, and automation subsystems. Public technical material indicates typical systems use 515/527/532 nm lasers, 20–100  $\mu$ m nozzles, and water-jet pressures of roughly 50–800 bar. Downstream demand is concentrated in applications that require extreme precision and minimal thermal impact, including semiconductor wafer dicing and edge processing, turbine-blade cooling-hole drilling and CMC machining in aerospace, medical-device

production such as implants, surgical blades, stents, and microtubes, as well as diamond, tooling, watchmaking, and advanced electronics manufacturing. Overall, this is a niche high-end equipment chain characterized by high upstream component barriers and highly specialized downstream applications.
