Abstracts

The global Laser Marking System market size is expected to reach $ 4023.1 million by 2029, rising at a market growth of 4.5% CAGR during the forecast period (2023-2029).

In the global market, the core manufacturers of laser marking systems are Han's Laser, Trumpf, Keyence, and other companies. The top five companies within this industry account for about 20% of the market share. North America, Europe, and Asia-Pacific are the major manufacturing regions for this product, with Asia-Pacific accounting for about 50% of the global market share. The product can be classified on the basis of product type into fibre laser marking machine, CO2 laser marking machine UV laser marking machine and other types. The products are widely used in electronics, chemical, food and beverage, automotive parts, pharmaceutical, precision instruments, cosmetics, and other industries.

The effect of laser marking is to expose deep materials through the evaporation of surface materials, or to burn off part of the materials through light energy to reveal the graphics and text that need to be etched. Most metals can be marked using a laser marking machine.

Laser marking system is laser equipment that uses laser beam to permanently mark the surface of various materials.

Compared with traditional marking technology, laser marking technology not only has more advantages in material loss and marking effect, but also is even better in terms of production and processing efficiency and output. Some new laser marking machines that are constantly being developed and applied are even more incomparable with traditional marking technology.
