## Abstracts

According to our (Global Info Research) latest study, the global Laser Peening Equipment market size was valued at USD 27 million in 2023 and is forecast to a readjusted size of USD 59 million by 2030 with a CAGR of 11.8% during review period.

Laser peening (LP), or laser shock peening (LSP), is a surface engineering process used to impart beneficial residual stresses in materials. The deep, high magnitude compressive residual stresses induced by laser peening increase the resistance of materials to surface-related failures, such as fatigue, fretting fatigue and stress corrosion cracking. Laser shock peening can also be used to strengthen thin sections, harden surfaces, shape or straighten parts (known as laser peen forming), break up hard materials, compact powdered metals and for other applications where high pressure, short duration shock waves offer desirable processing results. Sales in Value refers to the sales revenue of the equipment. Services Revenue refers to the revenue from using Laser Peening Equipment to provide services

Global core laser peening equipment manufactures include LSP Technologies, Inc., Toshiba, Tyrida Optical Electric Technology etc. In terms of product, stationary laser peening equipment is the largest segment, with a share over 80%.
