According to our (Global Info Research) latest study, the global Laser Printer Heating Fuser market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The laser printer heating fuser is a critical part of any laser printer. Using pressure and heat, it fuses the toner powder onto the page to create a print, and without it, the printer cannot operate. Fuser units eventually need to be replaced after frequent use. The fuser melts the toner particles, binding them to the page. The speed at which the paper passes through the fuser is what keeps the paper itself from burning. If the speed were slower, the paper would combust and burn. There is also a thermostat built into the fuser that makes sure heat from the fuser never exceeds a certain temperature.
