Abstracts

According to our (Global Info Research) latest study, the global Laser Selective Melting Equipment market size was valued at US\$ 1925 million in 2025 and is forecast to a readjusted size of US\$ 4118 million by 2032 with a CAGR of 11.4% during review period.

In 2025, global Laser Selective Melting Equipment reached approximately 3,573 units, with an average global market price of around 523.5 K USD/unit.

Laser Selective Melting Equipment (also known as SLM Equipment) is a core additive manufacturing device that utilizes high-energy laser beams to selectively melt and fuse metal powder layer by layer according to pre-designed 3D model data, ultimately forming complex-shaped metal components. It features a precision-controlled forming chamber, powder spreading system, and laser scanning system, enabling the direct fabrication of high-density, high-precision metal parts with intricate structures that are difficult to achieve via traditional machining. Widely compatible with various metal materials such as titanium alloys, aluminum alloys, and stainless steels, this equipment is critical for realizing the integrated manufacturing of customized and high-performance metal components.

Demand for Laser Selective Melting Equipment is driven by the accelerating adoption of additive manufacturing in aerospace, automotive, and medical industries, the growing need for lightweight and complex-structured components, and policy support for advanced manufacturing technologies globally. Business opportunities lie in developing multi-laser high-efficiency equipment to improve production throughput, advancing precision control technologies to enhance part quality and stability, expanding

compatibility with new metal materials (e.g., high-temperature alloys), and offering integrated solutions including post-processing and material supply to cater to the personalized and large-scale production needs of different industries.
