Abstracts

The laser tracking measurement system is a spherical coordinate measurement system composed of a single laser tracker. It is a new type of high-precision measuring instrument for large-scale, large-scale equipment, and real-time dynamic tracking. It integrates laser interferometric ranging, photoelectric detection, precision machinery, computer and modern control technology, and numerical calculation theory, etc., and can track and measure the three-dimensional coordinates of space moving targets in real time. The laser tracker is a precise three-dimensional coordinate measuring instrument, which has the advantages of high precision, fast speed, and easy movement.
