According to our (Global Info Research) latest study, the global Latching Power Relay market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Latching power relay refers to 'self-locking'. After the relay is energized, it automatically locks its state and keeps the circuit connected. Even if the control current is cut off at this time, its state will not be changed. That is to say, when the current is turned on and absorbed, the control current is cut off, and the state remains on unless the unlock button is pressed.
