## Abstracts

The global Latching Power Relay market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Latching power relay refers to 'self-locking'. After the relay is energized, it automatically locks its state and keeps the circuit connected. Even if the control current is cut off at this time, its state will not be changed. That is to say, when the current is turned on and absorbed, the control current is cut off, and the state remains on unless the unlock button is pressed.

This report studies the global Latching Power Relay production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Latching Power Relay, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
