Abstracts

The global Latent Curing Accelerator market size is expected to reach \$ 1304 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

Latent curing accelerator refers to chemical additive that remains inactive under normal conditions but initiates the curing (hardening) process of polymers?such as epoxy resins?when exposed to specific triggers like heat, moisture, or pH changes. This delayed activation allows for extended shelf life and greater control during manufacturing processes, making them essential in applications requiring precise curing schedules.

This report studies the global Latent Curing Accelerator production, demand, key manufacturers, and key regions.
