Abstracts

According to our (Global Info Research) latest study, the global Latex Medical Disposables market size was valued at USD 2944.6 million in 2023 and is forecast to a readjusted size of USD 4783.6 million by 2030 with a CAGR of 7.2% during review period.

Latex medical disposables such as latex gloves are used during surgeries and check-ups. The demand for latex medical disposables is therefore quite high among doctors, surgeons, and dentists across the globe. Primarily, there are two types of latex gloves available in the market. These are powdered and non-powdered latex gloves. The non-powdered gloves might witness relatively more demand when compared with powdered gloves, as powdered gloves were found to be hindering the healing process of patients.

The market might encounter obstacles owing to the prevalence of latex allergies that induce several healthcare professionals to use non-latex products instead. Moreover, with the intensifying competition, the market players might have to bring down the prices of their products. As a result, sluggish growth in revenue might restrict the growth of the global market for latex medical disposables. However, the impact of these restraints will be negated by the emergence of novel technologies.

The Global Info Research report includes an overview of the development of the Latex Medical Disposables industry chain, the market status of Hospitals (Latex Gloves, Latex Foley Catheters), Ambulatory Surgical Centers (Latex Gloves, Latex Foley Catheters), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Latex Medical Disposables.
