A latex remover is a product designed to dissolve, break down, or physically remove latex - based substances. It is formulated to interact with the chemical structure of latex, which is a polymer made from the milky sap of rubber trees or synthetically produced. Latex removers can be either solvent - based, using chemicals such as acetone or other organic solvents to dissolve the latex, or enzyme - based, which use biological agents to break down the latex polymer. These removers are used in a variety of settings such as in the medical field to clean latex residue from equipment and surfaces, in construction to remove latex - based adhesives or paint, and in manufacturing to clean latex - contaminated tools and machinery.
