Abstracts

The global Latex Sealant market size is expected to reach \$ 797 million by 2032, rising at a market growth of 2.7% CAGR during the forecast period (2026-2032).

Sealant is a substance used to block the passage of fluids through the surface or joints or openings in materials, a type of mechanical seal. In building construction sealant is sometimes synonymous with caulking and also serve the purposes of blocking dust, sound and heat transmission. Sealants may be weak or strong, flexible or rigid, permanent or temporary. Sealants are not adhesives but some have adhesive qualities and are called adhesive-sealants or structural sealants.

The main difference between adhesives and sealants is that sealants typically have lower strength and higher elongation than adhesives do. When sealants are used between substrates having different thermal coefficients of expansion or differing elongation under stress, they need to have adequate flexibility and elongation. Sealants generally contain inert filler material and are usually formulated with an elastomer to give the required flexibility and elongation. They usually have a paste consistency to allow filling of gaps between substrates. Low shrinkage after application is often required. Many adhesives can be formulated into sealants.

There are mainly two kind of Latex Sealant, including including EVA Sealant and Acrylic Sealant.

North America is the largest producer of Latex Sealant, with a market share more than 25%, followed by Europe and China, etc. Henkel, 3M, ITW, PPG and H.B. Fuller are the top 5 manufacturers of industry, and they had nearly 50% combined market share.
