A laundry chute is a facility used to transport clothes during the laundry process. It is common in some large laundry places or multi-story residential buildings. A laundry chute is usually an inclined pipe structure, generally made of metal (such as stainless steel) or high-strength plastic. Stainless steel laundry chutes are durable, fireproof, and corrosion-resistant, suitable for long-term use and various complex environments; plastic laundry chutes are relatively light, easy to install, and low in cost. The inner wall of the chute is required to be smooth to reduce the friction of the clothes during the sliding process to prevent the clothes from getting stuck or damaged.
