Abstracts

According to our (Global Info Research) latest study, the global Laundry Folding Robots market size was valued at USD 3299.1 million in 2023 and is forecast to a readjusted size of USD 9831.3 million by 2030 with a CAGR of 16.9% during review period.

Washing machines and dryers treat each item of clothing the same, but folding requires the appliance to identify garments and be able to physically fold them. Folding a towel is more complicated than it seems, and socks are currently impossible. Engineers at Tokyo-based company Seven Dreamers started developing a laundry-folding robot called Laundroid in 2005 and had their product 'Laundroid' showed off at CSE 2018.

To tackle the tedious task of folding laundry, Laundroid consists of three technologies: Image analysis, artificial intelligence, and robotics. Even though there are multiple robot arms that fold the clothes, they are hidden inside a box that is styled like Italian luxury furniture, made of leather, wood, and glass. The materials are purposefully luxurious since the price point -- starting at \$16,000 for the base model -- is much higher than most home appliances.
