Abstracts

Lauric acid, also properly known as dodecanoic acid, is a saturated fatty acid commonly found in coconut and palm oils, as well as in milk. Appearing as a white, powdery substance, its main use in manufacturing is as an ingredient in soaps and shampoos. Infants consume it during breastfeeding, and children, teens and adults ingest it by eating the fruits and oils that contain it. Research suggests it can have multiple health benefits because of its antimicrobial properties, but more studies are necessary to confirm initial results.
