## Abstracts

Lawn mower batteries provide the necessary power required for the lawn mowers to mow lawns. These batteries are specifically made for electric, battery operated, and hybrid lawn mowers. Power lawn mowers have evolved from the traditional hand-guided mowers to automatic electric mowers. Advances in technology have led to the development of lightweight power lawn mowers and battery-powered lawn mowers.

Scope of the Report:

This report focuses on the Lawn Mower Batteries in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Cordless electric mowers are powered by a variable number (typically 1–4) of 12-volt, 56-volt, and 80-volt rechargeable batteries. Typically, more batteries mean more run time and/or power (and more weight). Batteries can be in the interior of the lawn mower or on the outside. If on the outside, the depleted batteries can be quickly swapped with recharged batteries. Cordless mowers have the maneuverability of a gasoline-powered mower and the environmental friendliness of a corded electric mower, but are more expensive and come in fewer models (particularly self-propelling) than either. The eventual disposal of worn-out batteries is problematic (though they can be recycled), and the motors in some cordless mowers tend to be less powerful than gasoline motors of the same total weight (including batteries).

The worldwide market for Lawn Mower Batteries is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million

US\$ in 2017, according to a new GIR (Global Info Research) study.
