The global Lawn Mower market size is expected to reach \$ 22700 million by 2032, rising at a market growth of 6.8% CAGR during the forecast period (2026-2032).

A lawn mower is a machine utilizing one or more revolving blades to cut a grass surface to an even height. The height of the cut grass may be fixed by the design of the mower, but generally is adjustable by the operator, typically by a single master lever, or by a lever or nut and bolt on each of the machine's wheels.

North America is the largest market, with a share over 34%, followed by Europe and Asia-Pacific. In terms of product, Gasoline is the largest segment, with a share over 40%. And in terms of application, the largest application is Commercial, followed by Residential. Technological innovations have an important role in driving the growth of the market. To sustain in the competitive market, vendors should develop new ideas and technologies and stay up-to-date with the advanced technologies. The inclusion of technologies such as the internet of things (IoT) and machine learning (ML) so that lawn mowers learn about the obstacles and sensors work on the acceleration and orientation for improving performance and better results. For instance, Bosch uses both AI and ML in its lawn mowers for obstacle identification.
