The global Lawn and Garden Equipment market size is expected to reach \$ 30620 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

In 2024, global Lawn and Garden Equipment production capacity is 170 million units, with production volume reached approximately 105 million units, with an average global market price of around US\$ 210 per unit. The market gross margin is mainly 30%-40%.

Lawn & Garden Equipment refers to machinery used for lawn maintenance, garden trimming, landscaping, landscaping, site management, and outdoor cleaning. This includes lawnmowers, ride-on lawnmowers, zero-steering lawnmowers, robotic lawnmowers, blowers, trimmers, chainsaws, mini tillers, snowplows, etc., powered by fuel, power cords, or lithium batteries, and applicable to residential yards, commercial landscaping, municipal greening, parks, and golf courses. With the expansion of outdoor lifestyles, the popularization of residential gardening, the increasing mechanization of garden maintenance, and the accelerating trends of battery-powered and intelligent technologies, this industry has evolved from traditional OPE (Outdoor Power Equipment) into a mature market system that combines intelligent hardware attributes, continuous consumer attributes, and professional service attributes.

The lawn and landscaping equipment industry chain consists of 'core components ? complete machine manufacturing ? channel system ? end users': the upstream includes engines, motors, battery packs (Li-ion), cutter heads and blades, reducers, plastic housings, aluminum die castings, controllers, sensors (collision/positioning), intelligent drive modules, etc.; the midstream consists of complete machine manufacturers (such as Husqvarna, STIHL, Toro, Honda, John Deere, EGO/Chervon, Greenworks, Makita,

etc.), responsible for product design, platform development, final assembly and testing; the downstream channels include hardware/building material supermarkets (Home Depot, Lowe's), large retailers (Walmart, Costco), e-commerce (Amazon), landscaping equipment specialty stores, dealer systems and B2B engineering outsourcing companies; the end customers cover residential users, commercial landscaping contractors, property management companies, municipal departments, park and greening departments, golf courses, farms and airport site management units. The industry chain is characterized by 'the migration of core components to battery-based and brushless systems, cross-channel operation of complete machine brands, and a dual structure of 'residential popularization + commercial stability' in the downstream sector'.

The Lawn & Garden Equipment market has robust growth potential driven by three main factors: First, the continued growth in global demand for improved housing and the development of garden economies, particularly in North America, Europe, and Australia, is fueling increased penetration of home gardening equipment. Rapid innovation in robotic lawnmowers and lightweight battery-powered devices is also keeping the home market robust. Second, the expanding market for commercial landscaping and urban greening is driving stable demand for high-efficiency, low-emission commercial lawnmowers and chainsaws in municipal parks, school campuses, urban renewal projects, golf courses, and commercial parks. Third, policy initiatives promoting 'de-fueling,' 'low noise,' and 'zero emissions' are accelerating the replacement of fuel-powered garden tools with battery-powered equipment, leading to a rapid increase in the penetration of brushless motors, fast-charging systems, and high-voltage, high-capacity battery platforms (40V/60V/80V). Features such as robotic lawnmowers, intelligent navigation (RTK, vision), and IoT remote monitoring are continuously driving the market's upgrade from mechanical equipment to smart outdoor hardware. Overall, the global lawn and garden equipment market is expected to maintain a robust growth rate of 4–6% CAGR, with battery-powered equipment and robotic lawnmowers being the fastest-growing segments (10–20% CAGR). Residential consumption upgrades and commercial electrification will be the core growth engines over the next 5–10 years.
