The global Lawn Plastic Pellets market size is expected to reach \$ 3870.7 million by 2029, rising at a market growth of 2.4% CAGR during the forecast period (2023-2029).

Lawn plastic pellets are a material used to fill artificial turf, featuring durability, elasticity and customizability. They can increase the stability and elasticity of the lawn, provide a good pedaling experience and slip resistance. With the improvement of environmental protection awareness and the promotion of technological innovation, the application prospects of plastic particles for lawns in the field of artificial turf are good. They reduce dependence on natural turf resources and have the potential to be recycled. At the same time, the growth of the artificial turf market and the demand for sports venues will also promote the development of plastic particles for turf.
