Lay-in acoustical gypsum panels are specialized ceiling panels designed to enhance both the acoustic performance and visual appeal of interior spaces. These panels are made from gypsum, a versatile and durable material, and are installed using a lay-in grid system. With their perforated or slotted surface, these panels effectively absorb sound and reduce excessive reverberation, resulting in improved speech intelligibility and overall acoustic quality. They are available in various sizes, edge details, and surface finishes, allowing for customization to suit specific design preferences. Lay-in acoustical gypsum panels are commonly used in commercial buildings, educational institutions, offices, and other spaces where controlling sound reflections and creating a comfortable acoustic environment are important considerations.
