According to our (Global Info Research) latest study, the global Layer 3 Managed Switch market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A three-layer managed switch is a network switching device used to realize the forwarding and routing functions of data packets in a computer network. It has three main functional layers, namely physical layer, data link layer and network layer. Compared with Layer 2 switches (which only have physical layer and data link layer functions), Layer 3 managed switches have more advanced routing functions. It can forward and route data packets according to the IP address of the network layer, so that data can be transmitted across different networks. This makes Layer 3 switches suitable for scenarios requiring complex routing and cross-segment communication in large-scale enterprise networks.
