Abstracts

The global Layer 3 Managed Switch market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A three-layer managed switch is a network switching device used to realize the forwarding and routing functions of data packets in a computer network. It has three main functional layers, namely physical layer, data link layer and network layer. Compared with Layer 2 switches (which only have physical layer and data link layer functions), Layer 3 managed switches have more advanced routing functions. It can forward and route data packets according to the IP address of the network layer, so that data can be transmitted across different networks. This makes Layer 3 switches suitable for scenarios requiring complex routing and cross-segment communication in large-scale enterprise networks.

This report studies the global Layer 3 Managed Switch production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Layer 3 Managed Switch, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
