The global Layer Feed Additives for Laying Hens market size is expected to reach \$ 12346 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

Layer feed additives for laying hens are non-nutritive or nutritive substances added to the diets of laying hens to improve egg production, egg quality, gut health, immunity, and feed efficiency. In 2025, global layer feed additives production reached approximately 1,626K ton, with an average global market price of around USD 5,500 per ton. A factory gross profit of USD 1,100 per ton with 20% gross margin. A single line full machine capacity production is around 6K ton per line per year. The upstream is dependent on vitamins, amino acid and probiotic enzymes. The downstream demand is concentrated in feed manufacture, commercial breeder and organic layers. A postbiotic and saponin blend improved flock health, and sustained egg production during disease challenge. China and India market driven by high demand consumption and massive livestock population.
