Abstracts

Lazy eye refers to the drifting or misalignment of an eye. This is usually the manifestation of amblyopia, where one eye is experiencing significant vision loss, and sometimes also strabismus (or ?crossed eyes?), a general misalignment problem.

SCOPE OF THE REPORT:

This report studies the Lazy Eye market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Lazy Eye market by product type and applications/end industries.

The most common cause of lazy eye is strabismus. When the eye muscles aren't able to align the eyes properly, especially during development, the brain receives a different image from each eye. The confusion is resolved by the brain's systematically ignoring one of the images. This leaves the eye unused and the corresponding brain area underdeveloped. Another common cause is refractive error (near / farsightedness or astigmatism) that's greater in one eye. This also leads to mismatched input, then the precedence of one eye that causes the brain to ignore input from the other. Anything that creates this sort of visual imbalance can also cause amblyopia. This includes childhood cataracts, clouded lenses, shape or size differences and other anatomic or structural abnormalities.

The global Lazy Eye market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Lazy Eye.

Europe also play important roles in global market, with market size of xx million USD in 2017 and will be xx million USD in 2023, with a CAGR of xx%.
