The concept of life cycle assessment (LCA) is to measure the environmental impact of your products or services, taking into account all stages of a product's life cycle. It is a methodological framework that allows you to evaluate how your product design and activities affect the environment. Although life cycle assessment software has its roots in academia, it is currently used primarily in the consumer goods sector to measure carbon footprints, one of the main concerns of environmental sustainability. With LCA software, you can create a complete analysis of the environmental footprint of your products in a very short time. LCA software provides you with the data that can facilitate your business decisions to develop more sustainable products or services.
