Abstracts

According to our (Global Info Research) latest study, the global LCD Electronic Price Tag market size was valued at US\$ 55.13 million in 2025 and is forecast to a readjusted size of US\$ 133 million by 2032 with a CAGR of 13.4% during review period.

In 2025, global LCD Electronic Price Tag production reached approximately 2.14 million units, with an average global market price of around US\$25 per unit.

LCD electronic price tags are shelf-edge digital labels built on LCD technology (often TFT color LCD or segmented LCD), wirelessly connected to store systems to display prices, promotions, barcodes/QR codes, images, and even dynamic content. Compared with e-paper ESL, LCD tags typically offer richer color and faster refresh, but require continuous power (especially with backlighting/high brightness), leading to higher energy consumption and often shorter battery life?making them best suited for display-intensive use cases where stronger visual impact or dynamic updates are prioritized.

Upstream includes LCD modules and backlight components (TFT/segment LCD, driver IC, backlight), control/connectivity chips (MCU/SoC, RF, memory), power and batteries (coin cell/Li-ion, PMIC), mechanical parts and fixtures, plus in-store gateways/base stations and networking. Midstream solution providers deliver end-to-end systems (LCD tags + gateways + management software) integrated with POS/ERP/pricing platforms. Downstream adoption is led by retail formats such as grocery, convenience, consumer electronics, and warehouse retail?particularly where vivid promotion display (color/images/dynamic content) or frequent updates are valued.

LCD electronic price tags represents a ?high-visibility, promotion-first? path within the

broader ESL landscape, best suited for shelf zones where color, visual impact, and frequent content updates matter (e.g., consumer electronics, promotional end-caps, featured displays). As store digitalization deepens, retailers are upgrading shelf-edge from passive pricing to an execution endpoint for promotions and merchandising?where LCD can outperform e-paper in image-rich messaging. However, higher power consumption increases TCO sensitivity via battery maintenance, and robust RF planning plus device operations become more critical in real store environments. Going forward, LCD electronic price tags is likely to complement large digital signage and penetrate selectively at high-value touchpoints, while facing headwinds such as battery replacement frequency, display durability concerns, and integration/deployment complexity with existing pricing and retail IT systems.
