LCD substrate glass is a type of glass specifically used for manufacturing liquid crystal displays (LCDs). Glass is an important component of liquid crystal displays, serving as the substrate for thin film transistors (TFTs) and liquid crystal layers. Compared to other types of glass, LCD substrate glass has several advantages. It is highly transparent and allows light to be transmitted through glass, which is crucial for manufacturing high-quality liquid crystal displays. In addition, the glass is very durable and can withstand high temperatures and other harsh conditions, making it very suitable for various electronic applications.
