Abstracts

LDL stands for low-density lipoprotein, a type of cholesterol found in the body. LDL is often referred to as bad cholesterol. This is because too much LDL results in a build-up of cholesterol in arteries, which can lead to heart attacks and strokes. High levels of good cholesterol, called high-density lipoprotein (HDL), may decrease risk of developing heart disease. HDL helps transport LDL cholesterol to liver to be broken down and thus helps avoid damage to heart. Doctor may order an LDL test as part of a routine exam to determine patient's risk for heart disease and decide if any treatment is necessary.

SCOPE OF THE REPORT:

This report studies the LDL Test market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the LDL Test market by product type and applications/end industries.

Blood tests commonly report LDL-C: the amount of cholesterol which is estimated to be contained with LDL particles, on average, using a formula, the Friedewald equation. In clinical context, mathematically calculated estimates of LDL-C are commonly used as an estimate of how much low density lipoproteins are driving progression of atherosclerosis.

The global LDL Test market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.
