Abstracts

Energy storage systems (ESS) store surplus electricity and facilitate the use of batteries when the generated electricity is greater than the demand. The surplus power saved in these systems is supplied to the customers when the demand exceeds the supply. Countries are investing heavily in grid infrastructures to overcome the power supply irregularities, and this is expected to drive the growth of the battery market. ESS comprise various technologies, such as pumped-hydro storage systems, flywheels, lead-acid batteries, and advanced batteries (Li-ion).

Scope of the Report:

This report focuses on the Lead Acid Battery for ESS in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The lead–acid battery is the oldest type of rechargeable battery. Despite having a very low energy-to-weight ratio and a low energy-to-volume ratio, its ability to supply high surge currents means that the cells have a relatively large power-to-weight ratio. These features, along with their low cost, make them attractive for use in motor vehicles to provide the high current required by automobile starter motors.

The worldwide market for Lead Acid Battery for ESS is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
