Lead-bismuth alloy is an alloy composed of lead (Pb) and bismuth (Bi). It has a low melting point and good thermal conductivity and is widely used in the field of nuclear energy, especially as a coolant and radiation shielding material in fast neutron reactors. Its melting point is usually between 125° and 167°, which is suitable for working in high temperature environments. Compared with other coolants, such as liquid sodium, lead-bismuth alloy is less corrosive and safer to use. In addition, both lead and bismuth are high-density metals that can effectively absorb radiation and protect nuclear reactors and their surroundings.

This report is a detailed and comprehensive analysis for global Lead Bismuth Alloy market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
