Abstracts

Lead Dioxide Titanium Electrode is an electrode of massive lead dioxide in an extremely hard and dense form. It is produced by electrodepositing on titanium base material from an aqueous lead salt bath. Lead Dioxide Titanium Electrode is prepared by electroplating a stable and compact lead dioxide coating layer on a titanium substrate. Owing to its superior corrosion-resistance, high overpotential for the oxygen evolution reaction, and strong ability of oxidation in aqueous solution electrolysis properties, Lead Dioxide Titanium Electrode is comparatively performing better than other anodes in many electrochemical fields.

According to our (Global Info Research) latest study, the global Lead Dioxide Titanium Electrode market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
