According to our (Global Info Research) latest study, the global Lead-free Environmental Solder Paste market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The lead-free environmental solder paste is a soldering material that replaces the traditional leaded solder paste. It is used in soldering processes in electronic assembly and soldering processes, which can reduce lead pollution to the environment and human body.

The traditional lead-containing solder paste will release harmful lead vapor during the soldering process, posing potential risks to the working environment and the health of operators. The lead-free environmental solder paste uses lead-free alloys instead of traditional lead-tin alloys, which effectively reduces lead pollution to the environment and the human body. The characteristics of the lead-free environmental solder paste include: environmental protection and safety, good soldering performance, high reliability, and strong compatibility.
