Lead Lined Glass Windows are specialized windows that have a layer of lead incorporated into the glass or are coated with lead to provide radiation shielding. These windows are primarily used in environments where protection from ionizing radiation, such as X-rays or gamma rays, is necessary. The lead acts as a barrier to absorb and reduce the amount of radiation passing through the glass, making them essential in applications like radiology departments, nuclear facilities, and laboratories. Lead lined glass windows are commonly installed in areas where workers or patients may be exposed to radiation.
